Mountainous trail	56%	61%	64%	57%	49%	47%	47%	46%	46%	43%	43%	49%	47%

Additional golf holes using SolarDrive on Top

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Average
Flat trail	20	22	23	20	18	17	17	17	17	15	16	18	17
Hilly trail	15	16	17	15	13	12	12	12	12	11	11	13	12
Mountainous trail	10	11	12	10	9	9	9	8	8	8	8	9	9

Potential CO2 savings/car/year* 137 to 235 kilos or 301 to 517 lbs.**

**Source: NASA Langley Research Center Atmospheric Science Data Center (22 year average)

***CO2 savings are calculated compared to grid electricity supplied from modern power plants burning fossil fuels (0.49-0.85 kg CO2/kWh)

****If battery charge level is low from the start the S2E must be allowed the necessary time to charge as the energy is accumulated over the day

Disclaimer:

SolarDrive takes no responsibility for the correctness of the basic data obtained from the National Aeronautics and Space Administration (NASA), nor for the actual experienced results. The figures above are presented as a guideline only. Actual results may be influenced by many other varying factors such as length of course, altitude, seasonal and present weather conditions, time of year and day, shading (e.g., from buildings, houses, trees, mountains) and regular or irregular maintenance routines of the batteries and golf car.
