

To Whom It May Concern,

As General Manager of the Jockey Club Kau Sai Chau Public Golf Course, Hong Kong I have no hesitation recommending SolarDrive canopies for installation to all types of golf carts. Over the past year, I have had the pleasure of working directly with the SolarDrive team, in particular Eric Mak, Director of SolarDrive Distribution and Peter Randow, Managing Partner of SolarDrive Distribution, on the procurement and installation of their state-of-the-art solar technology to our 205 cart fleet.

The SolarDrive canopies have been engineered and designed, to enable our fleet of golf carts to capture and convert daylight into sufficient energy to power the golf carts, even on cloudy days. At Kau Sai Chau, we pride ourselves on our award-winning environmental programme and we initially became interested in SolarDrive's products because of the environmental benefits that the technology could provide. When we looked at the product in more detail we soon realized there were substantial cost savings as well.

Since, retrofitting the fleet with SolarDrive canopies we have been able to cut our electricity consumption across the fleet whilst at the same time reducing carbon emissions. In addition to the savings made on electricity bills, the continuous charging cycle that the technology facilitates, lengthens the life of the carts' batteries; providing yet further financial savings and reducing waste volume in lead acid batteries.

The increased efficiency of the golf carts using SolarDrive is well suited to the mountainous topography on the new East Course. With the cart path measuring over 14,000 meters, with 500 meters of climb and descent, the fact that the carts charge whilst being driven helps maintain ample power for climbing right up to the 18<sup>th</sup> Hole which is the highest point on the course.

The SolarDrive canopies also look very smart, thanks to the modern design and high quality finish. Indeed, the feedback we have received from golfers, staff, and media alike has been overwhelmingly positive – both in terms of concept, public relations, usability and aesthetics.

We are very pleased with the service that we have received from the SolarDrive team which has been first class. I have been impressed with their professionalism, commitment

to quality and after sales support. I have no hesitation in recommending SolarDrive for installations to golf carts and look forward to seeing many other like minded operators switching to this green technology for the good of the game. We searched extensively and are confident that in SolarDrive we have found the best performing, solar-cell solution for golf carts on the market. They have provided us with an innovative solution that makes both environmental sense and good business sense too.

Please feel free to contact us directly should you require any additional information or have any questions in relation to the above.

Yours sincerely,

Cameron Halliday  
General Manager
